Trans. of Zement-Kalk-Gips (West Germany) 1960,
v. 13, no. 6, p. 270-274.

X-ray diagrams and the results of counts of samples
of lime and cement are discussed. Elements down to
atomic number 11 can be determined. Elements with
atomic number 11 to 20 have to be determined in the
vacuum spectrograph, because too much absorption of
the radiation occurs in air. (Author)
